

The Lakes of England: Illustrated With Eighteen Coloured Etchings (Classic Reprint)

Excerpt from The Lakes of England: Illustrated With Eighteen Coloured Etchings Here hills and vales, the woodland and the plain; Here earth and water seem to strive again ; Not, chaos-like, together crushed and bruised, But as the world, harmoniously confused ; Where order in variety we see, And where, though all things differ, all agree. -Pope. Windermere is the largest of the English lakes, being eleven miles in length and three-fifths of a mile in breadth, its greatest depth (opposite to Eccletrigg Cragg) is 222 feet, and the entire surface of the lake comprises 4534 acres of water, together with 40 acres of land contained in the islands, of which there are several; in the centre of the largest one, formerly stood Holm Castle, which was attacked by the parliamentary forces during the civil ware. The lake is divided into two reaches or points of view, by the island of Belle Isle. The northern or upper reach is four miles in length and one in breadth : the lower or southern, seven miles in length, but considerably narrower and diminishing in width toward the southern extremity. These two reaches are interspersed with several beautifully wooded islands, in all fourteen in number, which are clustered near the middle of the lake, forming a group round Belle Isle, the largest; and are beautifully described by Professor Wilson as-Those sister isles that sleep Together, like a happy family Of beauty and of love.
