

# The Control of Municipal Budgets: Toward the Effective Design of Tax and Expenditure

The first comprehensive analysis of the design and effects of tax and expenditure limitations (TEs), *The Control of Municipal Budgets* shows how limitation measures have worked and offers practical guidelines for analyzing and designing such programs under current economic and political conditions. Looking first at the characteristics of different types of TEs, Merriman discusses the various ways in which limitations may be imposed. He next reviews the history and current status of TEs, beginning with control efforts imposed more than a century ago, and comments on the long-range consequences of such measures. He examines conventional government budgeting models (those not governed by TEs) and then develops a model for government behavior under a TE that will enable decisionmakers and analysts to understand how the effects of a TE are related to its design. In an analysis of New Jersey's Cap Law, the author applies the analytical model to a concrete instance and presents new evidence on specific effects of TE programs.
