

## The forest flora of New South Wales Volume 3

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: ... often forms an almost impenetrable scrub. On the bleakest parts of our ranges, up to between 4,000 and 5,000 feet, this dwarf gum luxuriates. It is often looked upon ns mallee, but it is not one of the true mallee species of the drier parts of this and other States, which have thickened root stocks. It is strict (erect) in its habit; hence the specific name. It is too small for timber. Height from fi to 15 feet, with bark falling off in strips, leaving smooth stems, and timber palecoloured. Juvenile Inwm.--Rather narrow-lanceolate. Mfiturr IntiM.--Rigid, very coriaceous, varying from narrow-linear to ovate-lanceolate. Usually hooked at. the apex. Often glossy. Hud.--The operculum very short, nearly hemispherical, surmounted by a point (umbonate). Much shorter than the calyx tube. Bentham speaks of the buds as ovo:d. This is hardly true as a general rule. J They are clavate, and often yellowish, especially the operculum. Floiir. The stamens are folded in the bud, and the anthers are all fertile and renantherous. The peduncles flattened or angular. Each with 4 to 8 (Benthim), or 5 or 6 (De Candolle), shortly pedicellate small flowers; the calyx tube not 2 lines in diameter, tapering. Fruit, (ilobosc-truncate, smooth, often glossy, up to 6 lines broad and 6 deep, but varying in size, contracted at the orifice, i.e., slightly urceolate, the rim narrow or thin, the capsule sunk, and the valves not protruding. Usually the valves are very much sunk, but occasionally (r.g., at Wentworth Falls) the tips of the valves are flush with the top of the capsule. The capsule is usually sunk in Blue Mountain specimens, the edge of the capsule (rim) being thin and gradually sloping into the orifice. In this variety wo

have:--1. The so-called mallee form. 2. The arboreal fo...
